TITLE: Liposomal local anesthetic and analgesic products

BSPR:

Liposomes, vesicles of phospholipid membranes, have been studied in recent years as a way of altering the pharmacokinetic properties of encapsulated drugs. A few studies have focused on their potential as drug carriers in topical preparations, for example involving corticosteroids, econazole, progesterone and methotrexate. Liposomal formulations of these materials were found which when applied topically delivered more of these drugs into the skin than conventional vehicles, (enhanced penetration) while at the same time localizing their effect at the desired site of action (enhanced localization) (M. Mezei in "Liposomes as Drug Carriers" ed. G. Gregoriadis, John Wiley & Sons Ltd., New York 1988, pages 663-677).

TITLE: ANTIMYCOTIC AGENT FOR EXTERNAL USE

FPAR:

PURPOSE: To provide an antimycotic agent for external use, consisting of a combination of an antimycotic agent and a phospholipid, having improved absorbability of the antimycotic agent to the skin, capable of sufficiently exhibiting the antimycotic activity and having remarkable remedying effect against water eczema, ringworm, tinea, favus, etc.

FPAR:

CONSTITUTION: The objective antimycotic agent for external use is obtained by combining (A) an antimycotic agent such as tolnaftate, clotrimazole, miconazole sulfate, ciclopirox olamine, etc., with (B) a phospholipid (especially preferably a soybean phospholipid or yolk phospholipid having a phosphatidylcholine content of 25~35wt%, especially a soybean phospholipid hydrogenated to an iodine value of <15). The content of the antimycotic agent in the above preparation is 0.1~3.0wt%, especially 1~2wt% and that of the phospholipid is 0.1~30wt%, especially 1~10wt%.

TITLE: Liposome(s) contg. allylamine and phospholipid - useful for high bio-availability and tissue distribution in skin, systemic and lung fungal infections treatment e.g. candidiasis

ABTX :

Liposomes comprise the allylamine deriv. of formula (I) (terbinafine) or acid addn. salt. Compsn. comprises (I) together with a phospholipid (II).

ABTX:

USE - Non-liposomal preps. of (I) do not require the use of surfactants. Admin. is peroral, topical or parenteral (esp. pulmonal) at a daily dose of 1 microg-10 mg/kg, (0.05-1mg/kg) (systemic infections), 0.1-10 mg/kg (pulmonal infections) or 10-10,000ng/cm2, (500-2000ng/cm2) (skin infections).

TTX:

LIPOSOME CONTAIN ALLYLAMINE PHOSPHOLIPID USEFUL HIGH BIO AVAILABLE TISSUE DISTRIBUTE SKIN SYSTEMIC LUNG FUNGUS INFECT TREAT CANDIDIASIS

DOCUMENT-IDENTIFIER: WO 9307847 A1
TITLE: ANTI-SEBORRHOEIC FORMULATION

FPAR:

An anti-seborrheic composition having either or both of a broad spectrum anti-fungal drug and/or a topical antiseptic. The composition can be formulated as a shampoo with a keratolytic or keratoplastic compound. The composition is preferably formulated as a shampoo with miconazole, chlorhexidine and it might include selenium sulphide.

TITLE: Ketoconazole shampoo containing butylated hydroxytoluene or butylated hydroxyanisole

FPAR:

A shampoo that contains ketoconazole, a surfactant, a foaming agent, thickener sufficient to give the final formulation a viscosity in the range of about 4,000 to about 9,000 cps at room temperature (i.e., about 20 DEG -25 DEG C.), preservative, butylated hydroxytoluene or butylated hydroxyanisole in an amount sufficient to retard degradation of the ketoconazole, and acid, base or buffer sufficient to give the final composition a pH in the range of from about 4 to about 10.

FPAR:

PCT No. PCT/AU92/00543 Sec. 371 Date Apr. 14, 1994 Sec. 102(e) Date Apr. 14, 1994
PCT Filed Oct. 12, 1994 PCT Pub. No. WO93/07847 PCT Pub. Date Apr. 29, 1993. An
anti-seborrhoeic composition containing both a broad spectrum antifungal drug and
a topical antiseptic is disclosed for the treatment of dogs. The composition can
be formulated as a shampoo further containing a keratolytic or keratoplastic
compound. The preferred antifungal drug is miconazole and the preferred topical
antiseptic is chlorhexidine, and the formulation optionally contains selenium
sulphide as an added ingredient.

Jan 9, 1996

DOCUMENT-IDENTIFIER: JP 08003042 A

TITLE: DANDRUFF PREVENTING AGENT

FPAR:

CONSTITUTION: This dandruff preventing agent contains miconazole of formula I and/or miconazole nitrate of formula II which is an imidazole-based antifungal agent in an amount of 0.01-2.0 pts.wt. as an active ingredient. The agent can be prepared in forms of shampoo washing away by using to head, cosmetic, etc., for hair such as hair tonic not washing away. The agent is excellent in dandruff preventing effect, compared with a conventional dandruff preventing agent and improved also in a seborrheic state in the head and exhibits long acting dandruff-preventing effect.

TITLE: Protein shampoo

BSPR:

Consistent with the foregoing objects, a shampoo composition is provided which is based on a biologically derived protein detergent known as a lipo protein natural detergent complex which is a complex mixture of lecithins, phospholipids, lipo-protein, lipo-oligopeptides, and amino acids. The shampoo also contains conventional ingredients such as anionic surfactants, boosters, stabilizers, preservatives, colorings, fragrances, and the like. Additionally, it is within the purview of the present invention to include in the shampoo composition other optional ingredients which are recognized as being conventional in the art for such preparations. These include, for example, organic or inorganic acids for pH adjustment, preservatives, antioxidants, chelating agents and the like.

BSPR:

The critical ingredient of the shampoo composition of the present invention is the lipo-protein natural detergent complex which is produced by Laboratoires Serobiologiques S. A. of Nancy, France, and sold under the name "CLP-3". CLP-3 is a detergent of biological origin in a hydro-polyol excipient. The protein complex is a combination of hydrophilic lipid complexes normally present in the tissues and lipo-protein detergent complexes. It is a mixture of lecithins, phospholipids, lipo-protein, and lipo-oligopeptides. The excipient is glycerine. Basically, CLP-3 is a 50% by weight solution of the lipo-protein natural detergent complex in glycerine and water, the glycerine content being about 5% by weight.

DETL:

TITLE: Silicone modified phospholipid compositions

BSPR:

It is therefore a further aspect of the invention to use the novel compositions of the invention, for example, in cosmetic preparations and the like, especially in preparations for hair care and skin treatment. In this connection, personal care formulations can be shampoos, hair conditioners, skin treatment cremes and lotions and after bath skin moisturizers, depending on whether the emphasis is on the cleansing effect or on the conditioning effect including the effect on better combability in hair care products. Other formulations where the unique properties of the novel compositions of the invention can be utilized include make-up cremes, sunscreens, lipstick, pressed powders, skin-toners, deodorants, antiperspirants and the like. Shampoos to which the novel phospholipid compositions of the invention have been added in amounts of 0.1 to 10 weight percent, and which contain up to about 30 weight percent of substances with detergent activity, besides water and possibly other additives cause washed hair to have fullness and an agreeable hand, to show a desirable gloss and to be easily combable. Practically no electrostatic charging of the hair is observed. In hair care products, such as, hair tonics or hair sprays, the composition of the invention in amounts of 0.1 to 5% by weight already bring about a significant improvement in combability of the hair as well as development of fullness and gloss.

DEPR:

The silicone-containing phospholipid compositions of examples 11, 13 and 14 are used in this example. Hair treating formulations such as shampoos and conditioners are prepared and evaluated as described below.

DEPR:

The silicone-containing phospholipid composition of example 11 is used in this example. The compatability of the silicone-containing phospholipid composition with a shampoo containing an anionic detergent is evaluated.

DEPR:

To test for the compatability of the cationic silicone containing phospholipid in typical anionic shampoo systems, an all-ammonium shampoo system often used in conditioning shampoos is prepared with a 15% by weight "hole" in the formulation to allow for addition of the silicone-containing phospholipid composition to material to determine if the system would remain clear. The formula for this shampoo formulation is shown below.

DEPR:

It was found that the shampoo formulation remains clear even after the addition of 15% by weight "as is" (4.5% silicone active) silicone-containing phospholipid composition of example 11. The shampoo also shows a noticeable drop in viscosity and a marked conditioned feel on the skin after rinsing and drying versus the same shampoo with no silicone addition.

DEPR:

In a further evaluation a commercially marketed shampoo (a clear system) is mixed with 1% and 5% by weight active levels of the cationic silicone-containing phospholipid of example 11 in water to check for its compatability in the anionic shampoo system.

DEPR:

In combination with the commercial shampoo, formulations prepared with both 1%

In combination with the commercial shampoo, formulations prepared with both 1% and 5% added silicone levels remained clear after addition to the system. The shampoo with 5% active silicone added also shows a noticeable drop in viscosity, while the 1% active silicone shampoo shows little change. From these studies it appears that this class of cationic silicone containing phospholipid compositions is compatible with clear anionic shampoo systems, even at rather high levels.

TITLE: Phospholipid virucidal compositions

BSPR:

In accordance with the present invention there has now been discovered novel phospholipid agents which surprisingly exhibit both excellent broad spectrum antibacterial and antifungal activity suitable for use as preservative and/or disinfectant agents in a variety of personal care compositions, household cleaning formulations and the like. These agents have also been found to possess potent virucidal activity making them particularly useful as a disinfectant, and for immobilizing and/or killing a variety of infectious viruses. The novel antimicrobial agents of the invention, which also exhibit virucidal properties, comprise particular synthetic phospholipid compounds that may be represented by the following general formula: ##STR3## wherein: x=1 to 3 or mixtures thereof;
